

## VOICE

Services

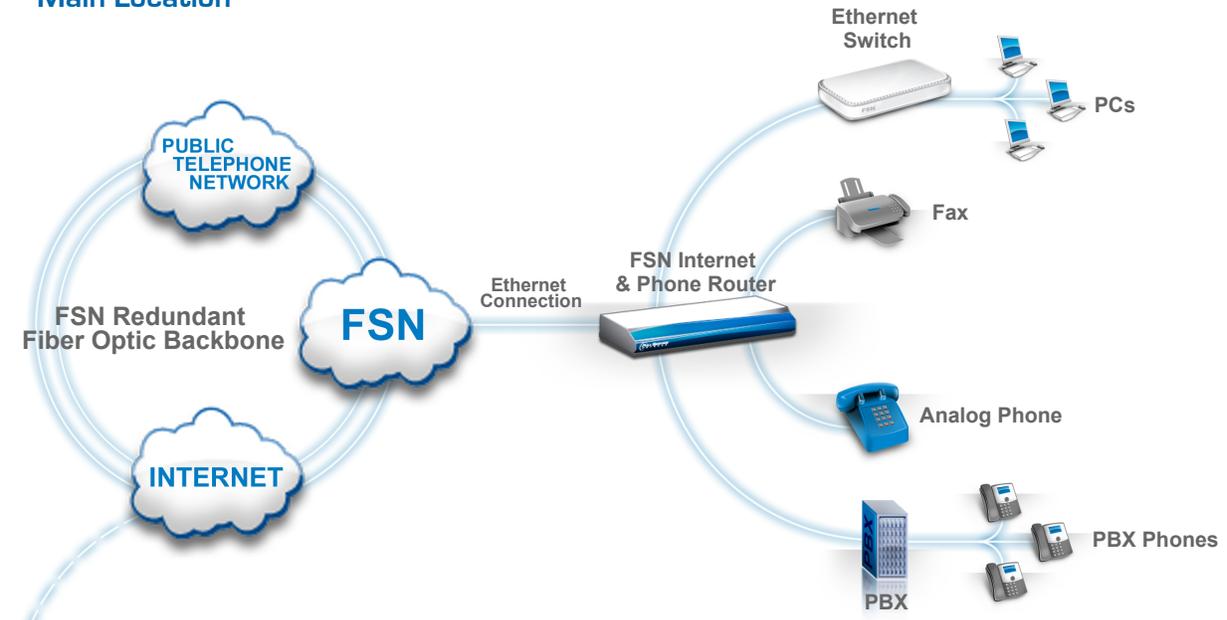

Why pay for an Internet connection and then another connection for your phone service? Get the most out of your [Full Service Network Ethernet](#) by also using it for your local phone and long distance service. Whether you're a small business with a few phone lines, or a large company with multiple T1's, [Full Service Network](#) can route your local and long distance service across your Ethernet connection.

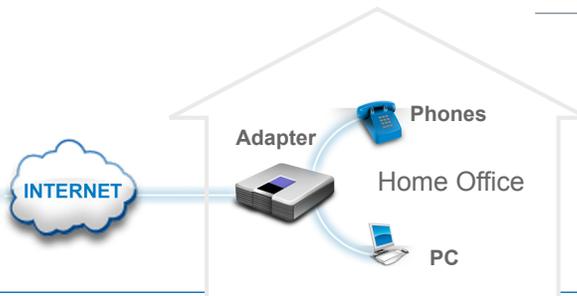

[Full Service Network Ethernet](#) can deliver normal POTS, Centrex lines, PRI T1's, and even connect directly into [VoIP](#) ready phone systems. Only one thing changes when your phone service is delivered to your business via [Full Service Network Broadband's Ethernet](#) - the price goes down. So stop wasting money, and use [Full Service Network Ethernet](#) for both your Internet and your telephone needs.

### Sample Configuration Main Location

### Telecommuters Out Of The Office

With a residential FSN Broadband account, your employees can make calls from home or anywhere else they have access to a high speed Internet connection. With plans starting as low as \$14.99 a month, it's the perfect way to enable them to be productive while away from the office.
